

DID YOU KNOW?

THAT THE BROWN OR GREEN RESIDUE SLOWLY BUILDING UP ON YOUR SIDING, GUTTERS AND PATIOS IS MOST LIKELY MOLD OR MILDEW?

This is not a problem unique to you or any indication of poor housekeeping. Mold and mildew thrive in areas that get less sunlight and stay damp longer. Poor air circulation possibly caused by dense vegetation or items stored close to your home can also promote growth.

There are a few alternative methods to power washing such as cleaning by hand, hire a company to clean by hand and foam washing. See the "Do-It-Yourself" (DIY) solution in the right hand of this flyer.

Mold or mildew on siding is unsightly. We ask if you have this on your home to please power wash your siding to have it removed. Please note that mold and mildew on siding or other areas of your home are violations of the covenants of the community and can result in fines. Help us keep Perrywood beautiful, protect the property values of all homes and as always show **Perrywood Pride!**

Alternatives to Power Washing

Solutions:

4 gallons of water mixed with 1 cup of detergent

Mixture of 1-part oxygen bleach and 5 parts water

Mixtures of 1-part dish detergent and 10 parts water

Tools: mop, soft bristle brush, 5-gallon bucket, broom (with old towel & duct tape)
